Features of Impala Plus

RECOIL PAD & STOCK

Special shock absorbing material combined with perfect coating offers snag-free, fast shouldering.

Removable cheek riser offers perfect fit in sport shooting, waterfowl hunts and using optics.(only synthetic models)

5 pcs of stock angle adjustment shims also included in the box for perfect fit.

BOLT

Unlike most shotguns, lock attaches directly to barrel itself with 6 lugs. This feature gives bigger and safer locking surface and easy opening of the lock with 15 °'s turn.

Turn & remove cocking handle can be taken off the gun with 90 ° degree turn, this feature is an additional safety for storing the gun where there are kids around. Also, it's quite handy in disassembly when you need to remove the mechanism from receiver. Lightweight aircraft grade aluminum receiver made with state-of-the-art machinery of Istanbul Silah.

RECEIVER

Lightweight aircraft grade aluminum receiver made with state-of-the-art machinery of Istanbul Silah. Each receiver has two stainless steel rails mounted inside, this way hardened steel bolt does not contact the aluminum receiver and works with less friction thanks to surface quality of the rails. Also, it prevents abrasion in the receiver to make the gun stay new for decades.

LIGHTWEIGHT

Comfortable carrying and shooting thanks to 3.2 kg (7 lbs.) overall weight.

SIGHTS

All models comes with Tru-Glo fiberoptic sights. Thanks to the original Tru-Glo rear sight and shallots, it provides high visibility even in low light conditions

TRIGGER

The ergonomic trigger group of Impala Plus is far beyond it's competitors in terms of mechanical structure. It provides high security in accordance with SAAMI standards.

OVERMOLD

Special "overmold injection" system used for placing anti-slip material on the stock and forend. Excellent handling on maneuver added to perfect balance of Impala Plus feels like shooting from an extension of the body.

BARREL

Drilled from 4140 steel, each and every barrel controlled for internal tiny cracks with magnetic resonance. Tested with 1.550 BAR. Internal bore diameter of the barrel is 18.7mm in high rib models.

It's large barrel inner diameter reduces friction and kickback, while preventing pellet deformation, providing excellent grouping.
